It is noted that the machine translation of JP2001200151 was provided by applicant without the translation of the critical final ~50 paragraphs.

Claims 4-10 objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim must refer to other claims in the alternative and cannot from other multiply dependent claims. See MPEP § 608.01(n). Accordingly, the claims 4-10 not been further treated on the merits.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 rejected under 35 U.S.C. 103(a) as being unpatentable over Umeyama EP1188792 in view of JP2001200151.

Umeyama exemplifies (tables 3-11) blends of polycarbonate, branched polymethylphenylsiloxane, a sulfonate salt and PTFE. The polymethylphenylsiloxane has a high degree of branching and a high amount of phenyl groups (table 1). The blends may additionally include phosphorous flame retarders (paragraph 34).

Phosphazene flame retarders are not named.

Phosphazene flame retarders are known to be effective in polycarbonates when used in combination with sulfonate salts or polymethylphenylsiloxanes (see table of

Art Unit: 1712

JP2001200151). The phosphazene would be also effective when used with both polysiloxane and organic salt (paragraph 83 of JP2001200151).

It would have been obvious to use a phosphazene flame retardant as the phosphorous flame retardant called for by Umeyama. AN improvement in flame retardancy would be expected.
